# TEA Middleware

## *Clearview's TEA Middleware*

Clearview's TEA Middleware provides a rapid and cost effective method to extend back office applications out to the web for mobile access. TEA-Transforms Enterprise Applications, and serves them out through an industry standard web server, easily accessed by any browser ready mobile/wireless device.

Extending key business processes and data out to the workforce and customers, when they are trapped in legacy applications, is a complex and costly undertaking. With TEA Middleware you can protect your investment in legacy applications, including character based, green screen, Windows client/server and outdated Web applications. No changes or costly rewrites are required to blend, filter and add new functions. With TEA Middleware there is no need to load client software on the mobile/wireless laptop, PDA, Smart Phone or Hand Held. As long as the device is browser ready, it can access your TEA enabled applications.

### **With TEA Middleware you can:**

#### ***Accelerate the implementation of mobile solutions.***

*Connect to any browser ready device  
No Costly and Time Consuming IT Re-Write  
No Waiting for Legacy Application Replacement*

#### ***Mitigate Risk of Seemingly Complex Projects***
